PROJECTS

- **ThrillQuest : Adventure Travel Booking Platform**| *HTML, CSS, Bootstrap, React, JavaScript*   February 2025
    - Users search for adventures based on type, location, and budget.
    - The platform, built with HTML, CSS, Bootstrap, React, and JavaScript, filters and displays options. Future updates will add APIs, secure payments, and real-time booking.
    - Delivers a seamless booking experience with an interactive UI, real-time availability, and secure transactions.

- **Virtual Herbal Plant Garden |** *React.js, Node.js, HTML, CSS*   January , 2025
    - Users browse or search for herbal plants, accessing details like descriptions, benefits, and growing conditions.
    - The platform, built with React.js, retrieves plant data, displays interactive 3D models (if applicable), and provides multimedia content for an engaging experience.
    - Delivers a seamless virtual garden with detailed plant information, interactive visuals, and educational content.

- **MoveMaster : Logistics Management System |** *SQL Server*   October – November , 2024
    - Businesses enter shipment details, inventory data, and order requests.
    - The system tracks shipments, automates order processing, and optimizes logistics using real-time monitoring and data management.
    - Delivers improved supply chain visibility, efficient inventory management, and streamlined logistics operations.
